LinkUp Announces New Android Application

Minneapolis, MN – LinkUp, the fastest growing job search engine on the web today, announced the release of its free Android application for job seekers. Exactly like LinkUp’s iPhone app and website itself, LinkUp’s new Android app allows job seekers to search job listings that are found exclusively on company websites. LinkUp’s job search engine indexes over 22,000 company websites and updates those job listings every night. As a result, jobs on LinkUp.com and its mobile applications are always current, often unadvertised anywhere else, and contain no fake jobs or scam listings.

LinkUp’s Android and iPhone application, called “Job Search Engine,” allows job seekers to search for relevant job listings by keyword, location, company, or industry. Users can also save jobs to a Favorites list and access their Favorite jobs on their computer at a later time via a web browser or RSS feed reader. Job seekers can also save specific search queries as job alerts and be notified via email of all new matching jobs.

Additional features include email alerts when Favorite jobs are closed by the employer, the ability to instantly email relevant jobs to any email address, and the ability to apply to job openings directly from any Android phone. Finally, the “Job Search Engine” app utilizes sophisticated compression technology and is capable of delivering extremely fast search results on Edge, 3G, or WiFi networks.

Job seekers can get the Android app by scanning the QR code with their Android Barcode scanner or by going to the Android Market and searching for “Job Search Engine.”

About LinkUp

LinkUp is owned and operated by JobDig, an employment-focused media, technology, and advertising company that has been serving employers and job seekers since 2001. With LinkUp, the company continues its history of innovation in the industry with completely unique paid search advertising solutions for employers and the highest quality job listings available on the web today for job seekers.
